

Evolution Split

## NEW ACTIVE BALANCE

### Evolution Split – Product # 4008

The Evolution Split provides a new option for active seating, with superior quality and adaptability. The forward tilt of the seat helps maintain proper spinal alignment, while the 360 degree rotation allows for easy and fluid movement. The seat gently distributes weight over the pelvic sitting bones, maintaining balance and strengthening core muscles. The split design takes pressure off the legs for improved circulation and comfort. This combination allows the user to move freely and safely, making the Evolution Split ideal for fast-paced environments such as dental or medical offices, or any other detail-orientated workplace.

#### **The features of the Evolution Split include:**

- Adjustable stool height from 24" to 32" to fit most standard desks and accommodate most users
- Adjustable and ergonomic seat provides comfort and durability
- 360 degree rotation allows for easy and fluid movement while maintaining proper posture and balance
- Split design encourages proper posture, circulation, and core strength

---

After extensive research and consultation, we are pleased to introduce another new Active Seating option

---

The Evolution Split utilizes the same Active Sitting principle as our Original Evolution Ball Chair to promote core strength, improved posture and overall back health
