

Evolution Hemisphere

NEW KID IN THE STOCK

Evolution Hemisphere – Product # 0501

The Evolution Hemisphere follows our original Evolution Ball Chair as another quality option for active seating. The swivel seat allows for continual movement, taking pressure off the spine, releasing muscle tension and promoting proper circulation. The ergonomic half-ball seat and lack of a backrest encourage perfect posture and engage core muscles. The sleek and compact design makes it practical for most standard desks and a variety of working and living spaces.

The features of the Evolution Hemisphere include:

- Adjustable stool height from 18" to 23" to fit most standard desks and accommodate users of different heights
- 360° swivel seat allows for easy movement while base provides stability
- Lightweight, attractive and compact design
- Anti-burst half-ball seat with pump provided for easy inflation

A New Active Seating Option

Our new Evolution Hemisphere stool is designed with the same active sitting principle as our original Evolution Ball Chair. Active sitting utilizes dynamic movement to promote core strength, improved posture and overall back health
